

The Workshop on Social, Human, and Economic Aspects of Software (WASHES 2016), in its first edition, aimed at putting together competencies and technologies of these three related aspects: social, human and economic. Its main topic was “Challenges of Quality and the Social, Human, and Economic Aspects of Software”. WASHES brought together researchers and practitioners that have interests in social, human, and economic aspects of software in order to discuss models, methods, techniques, and tools to achieve software quality and deal with the existing challenges in this context.

The event was held in Maceio, State of Alagoas, Brazil, in October 25th, co-located with XV Brazilian Symposium on Software Quality (SBQS 2016).
